

MESEC ŠIRJENJA UPORABE E - GRADIV

MATEMATIKA

8. razred

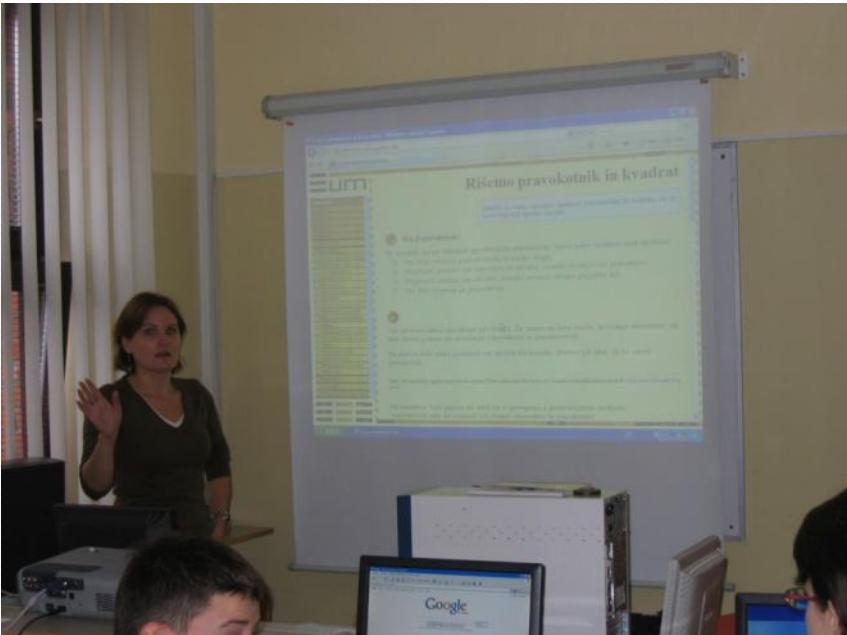

November, 2008

Učenje matematike s pomočjo spletnne strani: <http://www.e-um.si>

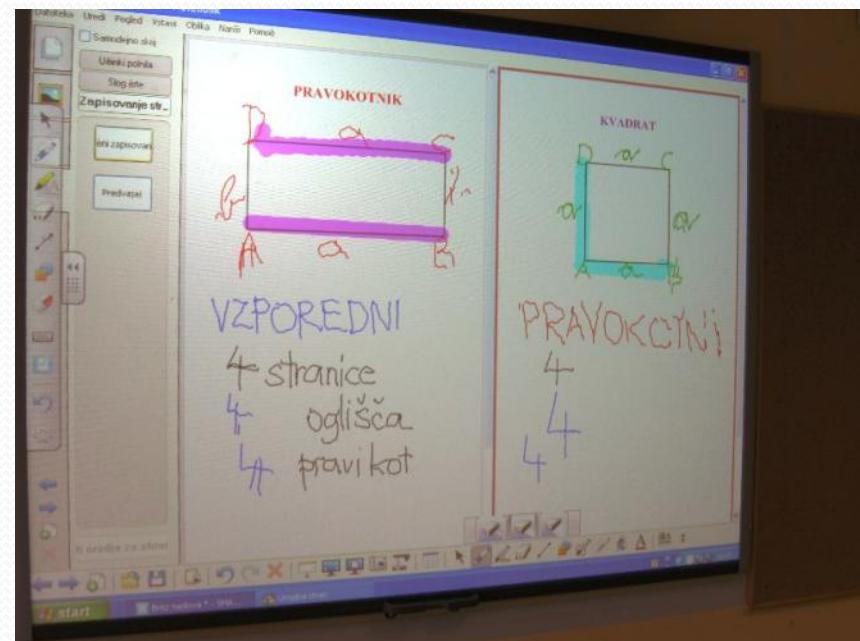

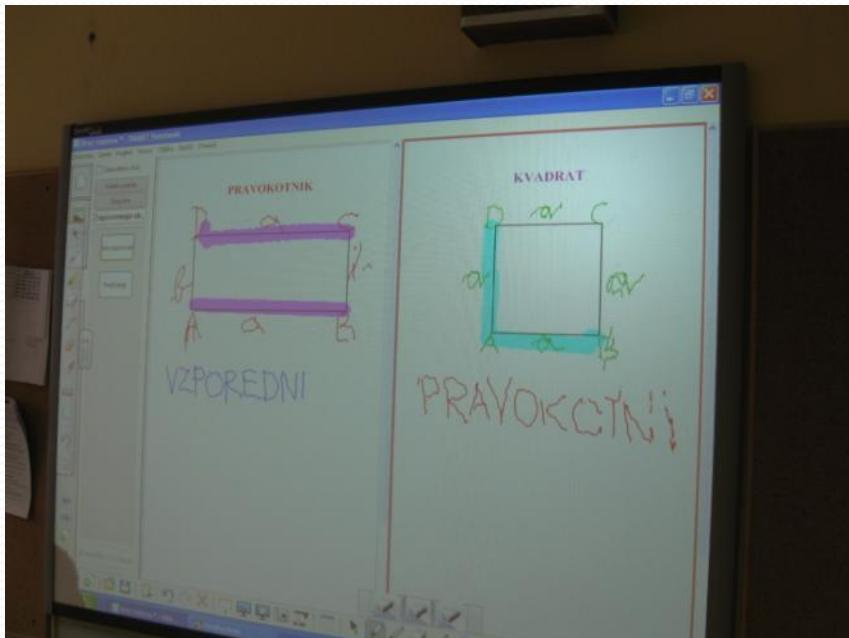

**Spoznali smo lastnosti
pravokotnika in kvadrata.**

Izpolnili smo miselni vzorec.

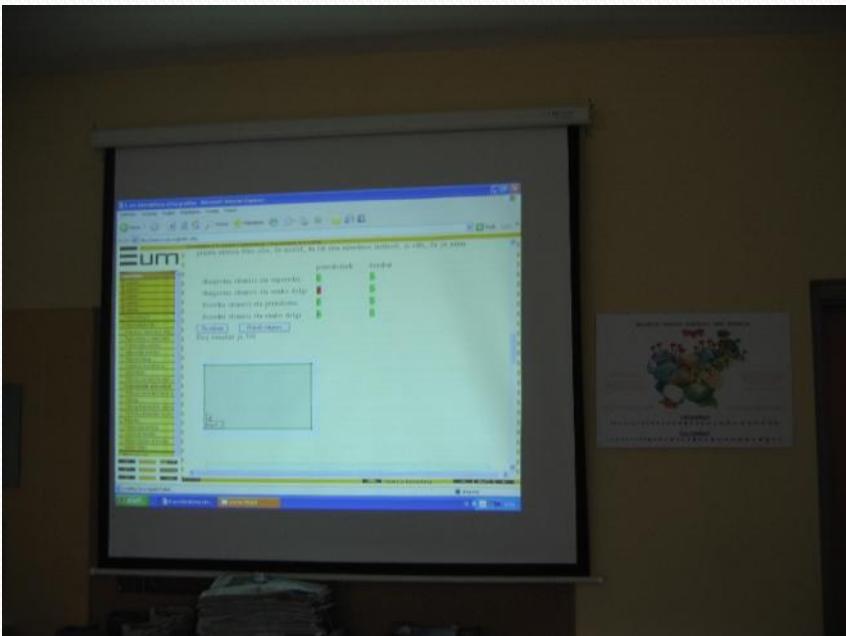

Na interaktivni tabli smo narisali pravokotnik in kvadrat...

ter oba lika primerjali....

Naloge smo reševali kar na spletu ... in hitro preverili ali imamo prav.

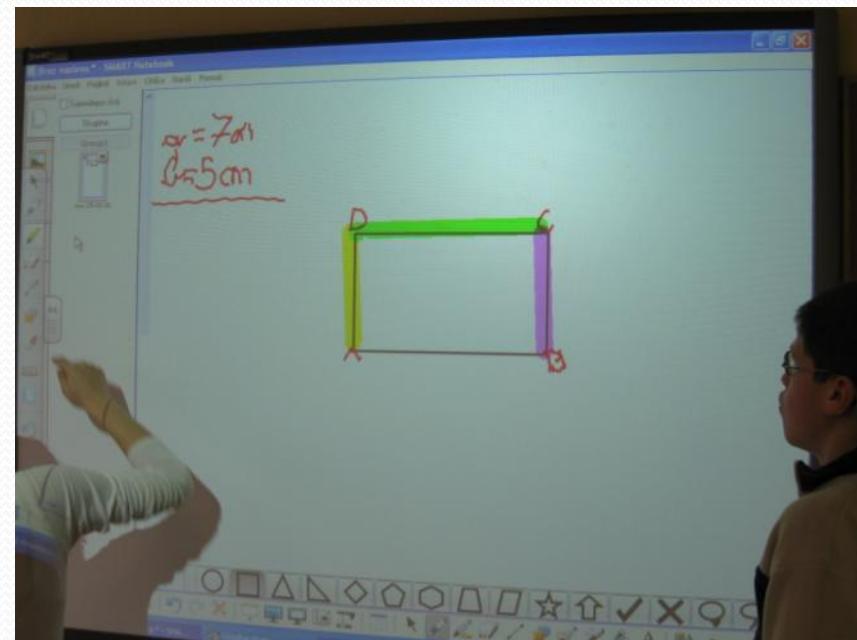

S pomočjo navodil na spletni strani smo narisali kvadrat. Navodila smo lahko poslušali znova in znova...

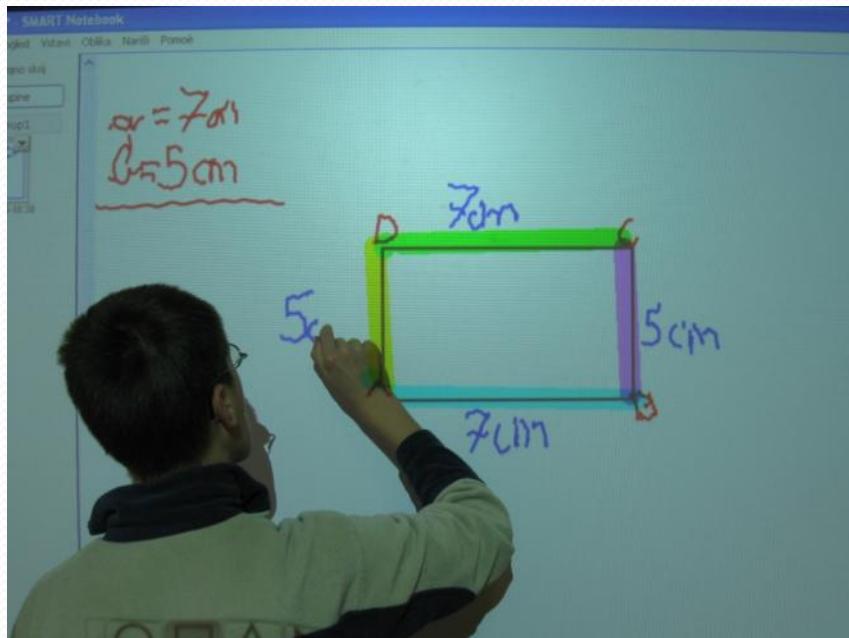

Ogledali smo si, kako se izračuna obseg lika.

The screenshot shows a digital textbook interface for grade 5 geometry. The title 'Obseg' (Perimeter) is at the top. A text box says: 'O geometrijskih likih vemo že precej, v tem gradivu pa se bomo naučili še izračunati ali iznenetiti njihov obseg.' Below it, a story about a rabbit named Stric Matic who wants to build a fence around his garden is displayed. The garden is a trapezoid with dimensions: top side 5 m, left vertical side 4 m, bottom side 4 m, and right vertical side 3 m. A character in overalls stands next to the garden. At the bottom, there are two questions: 'Na sliki vidiš, da je ena stranica dolga 5 metrov, dve pa 4 metrov in ena 3 metre. Ali znaš določiti potrebno dolžino ogreja?' and 'Kaj je treba narediti? Pomogni!'. The left sidebar lists chapters from 1st to 9th grade, and the bottom sidebar has icons for different subjects.

Na interaktivni tabli smo narisali pravokotnik.

Označili smo stranice, oglišča in se poigrali z barvami.

Izračunali smo obseg in zapisali izračun.
