THINK INNOVATIVE

We strongly believe that the key to combating unemployment among young people is forging stronger connections among employers, VET providers and youth themselves to build skills that lead to entry-level jobs in growth sectors.

RAY aims to establish a reliable and sustainable VET - business partnership in automotive and automation sectors for human resource planning and development.

Main project results represent innovative work based learning / apprenticeship model and VET teacher - in-company trainer partnership model, with clear definition on partners and targets roles, responsibilities and activities, which will be integrated into educational and working process at schools and in companies.

Our vision

Design a collaborating and engaging ecosystem where everyone can grow into a successful professional.

Our goal is to create VET provider - business partnership for human resource planning and development, according to the needs of young generations and global, digital labour market and society:

- to reduce unemployment of young people,
- to reduce skills mismatch,
- give young people opportunities to be an active partner and designer in these partnerships,
- to enable discovering and developing one's own potential.
